

KILLER APPLETS

UPB Home Automation Control

Bedside Control of House Lights

BENEFITS

- **Safety and security** — light up the house immediately if you hear a strange noise
- **Convenience** — turn lights on and off from your bedside
- **Easily installed using:**
 - 2 or more lamp or appliance modules
 - 1 Desktop controller
 - Wall dimmers (optional)
 - Intelligent controller (optional)
 - 1 Computer interface module (optional)

Turn all the lights on or off from your bedside.

SOMEONE (we're not saying who) forgot to turn off the lights, but you're already in bed. What to do? Use a UPB bedside controller to turn them all off without so much as getting out of bed. Or make your house smart enough to do the work. Use the intelligent controller to set up a macro so when you turn your bedside light off, ALL other lights in the house go off as well. In either case, if you prefer diffuse light to total darkness, use UPB's nearly unlimited dimming features to set lighting levels to your liking.

WHAT IS A KILLER APPLETS?

"Killer App" is industry jargon for an application that persuades users to buy the system it runs on.

There is no single killer app for home control, but there are many Killer Applets — UPB-based applications that can satisfy your individual needs.

Take a look at our collection of Killer Applets and we think you'll agree: home automation using UPB is the right choice to enhance the safety, security, and comfort of your home.
