

KILLER APPLETS

UPB Home Automation Control

Secure Entry Package

BENEFITS

- **Safety and security — never come home to a dark house again**
- **Easily installed using:**
 - 1 input/output module
 - 1 magnetic contact sensor
 - One or more controlled lights
 - Intelligent controller (optional)
 - 1 Computer interface module (optional)

Turn on lights in your home when the garage door opens.

ARE YOU WORRIED about a family member coming home late at night to a dark house? Set up a secure entry system with UPB.

Get a magnetic contact closure, mount the wired side to the frame of the garage door, and mount the matching piece to the actual garage door. There are different types of magnetic contact closure devices, but the easiest to set up is the type where the contact closure is open when the two pieces are in close proximity to each other.

Now, when the garage door is closed, the contacts are open, but when the garage door is opened, the contacts close. The wires from the contact closure are connected to one of the inputs on an input/output module.

The module detects the contact closure and sends out a UPB signal that can be used to activate a scene or link. This scene or link could turn on any controlled lights within the house.

WHAT IS A KILLER APPLETS?

"Killer App" is industry jargon for an application that persuades users to buy the system it runs on.

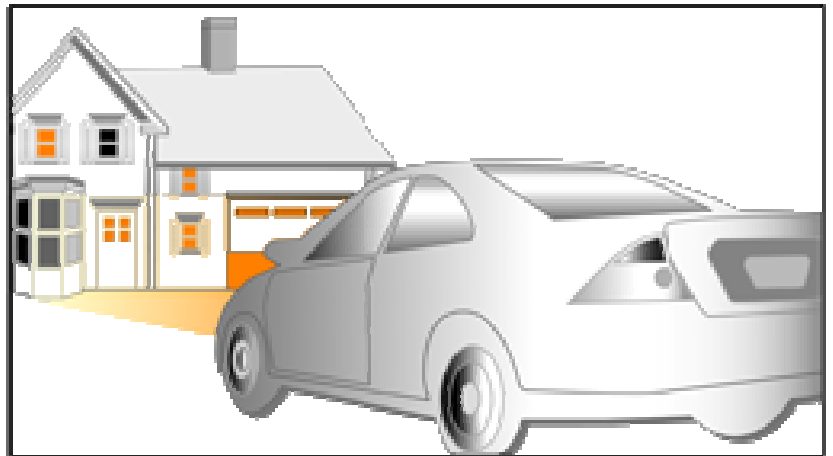

There is no single killer app for home control, but there are many Killer Applets — UPB-based applications that can satisfy your individual needs.

Take a look at our collection of Killer Applets and we think you'll agree: home automation using UPB is the right choice to enhance the safety, security, and comfort of your home.

For UPB product information email us at:

info@webmtn.com.

For immediate attention call: **720-207-9174**.

With an intelligent controller, such as the Web Mountain NetPlace server, you could then turn off the lights after five minutes. Safety and convenience courtesy of UPB!
